

Anthony C. Ruocco, Ph.D.
University of Toronto

Research Project Title:
Magnetic Seizure Therapy for the Treatment of Suicidality in BPD

Dr. Ruocco will conduct a trial of magnetic seizure therapy (MST) with patients with BPD who are suicidal. MST is an innovative brain stimulation technique that shows promise for treating suicidal thinking and behaviors. The treatment target will be the dorsolateral prefrontal cortex, the brain region responsible for managing emotions and controlling impulsive behaviors.
